Alfredo Ruggeri was born in Vicenza, Italy in 1955. He received his Doctoral Degree (Laurea in Ingegneria Elettronica) from the University of Padova, Italy, in 1979. Since 1979 he has been associated with the Department of Information Engineering of the University of Padova, where he is presently an Associate Professor of Biomedical Engineering. He is faculty member of the PhD curriculum in Bioengineering at the University of Padova. In 1982 he was Visiting Scholar at the Biocybernetics Laboratory, Departments of Computer Science and Medicine, University of California, Los Angeles, CA, and from 1994 to 2003 he has spent part of summer as Visiting Professor at the Department of Bioengineering, University of Washington, Seattle, WA, USA.

His research activities have been in the field of modeling of metabolic and endocrine systems, with the use of simulation, system identification, and optimal experiment design techniques. His current research interests are in the area of biomedical image processing and analysis and their application to ophthalmology, with special emphasis on the analysis of corneal and retinal images. He published over 150 papers in peer-reviewed international journals, books and conference proceedings and has been the organizer of sessions on image analysis in ophthalmology at various international conferences. He consulted with several biomedical companies on data analysis in laboratory medicine and on image processing and analysis in ophthalmology.

Prof. Ruggeri is a Senior Member of the IEEE Engineering in Medicine and Biology Society (EMBS), and member of the Association for Research in Vision and Ophthalmology (ARVO).
